Subject: RECOMMENDATIONS FOR CLEANING AND SANITIZING MCFARLANE PUSH-PULL CONTROLS

Dear Customers:

McFarlane has received a number of inquiries seeking guidance on how best to clean and sanitize our push-pull controls for the COVID-19 virus. At this time, we are making the following cleaning and sanitizing recommendations to be completed between flights.

Recommended Cleaning Process

- 1. Put on clean disposable gloves prior to cleaning and disinfection.
- 2. Pull controls back to the fully retracted position to expose the full length of the control shafts.
- 3. Isopropyl alcohol is the only approved sanitizing fluid for McFarlane controls. Do <u>NOT</u> use any methanol based sanitizers or other solvents to clean these controls.
- 4. Apply isopropyl alcohol to a clean microfiber towel. Do not spray any solution directly on the controls or any other surfaces or components in the aircraft.

!!! WARNING: DO NOT USE BLEACH WIPES ON ANY MCFARLANE CONTROL !!!

- 5. Gently and thoroughly wipe down every control knob surface and control shaft.
- 6. Let cleaning solution dry on these surfaces (contact time).
- 7. Use a clean and dry microfiber cloth to wipe away any solution residue left on knob and control shaft surface.
- 8. Remove all gloves, towels, and cleaning supplies from the work area in the aircraft.

Please contact McFarlane sales directly at 785-594-2741 or sales@mcfarlaneaviation.com if you have any additional questions regarding the disinfection of our controls.

Sincerely,

McFarlane Aviation Products
